OU2 Surface Water IM/IRA Wastes

J. E. Evered, Director
Environmental Management
EG&G Rocky Flats, Inc.

It has come to our attention recently that the spent Granular Activated Carbon (GAC) vessels at the Operable Unit 2 (903 Pad, Mound, and East Trenches) Walnut Creek Interim Measure/Interim Remedial Action have been stored at the site of the IM/IRA since as early as January 1992. Your staff have informed us that analysis of the carbon in the GAC vessels is not yet back from the lab and it has not been determined whether they contain mixed wastes. As there is the possibility that we are in violation of RCRA in keeping the vessels there for more than 90 days, please provide us a status of the GAC vessels and what considerations have been given to re-generation offsite or onsite, analytical sampling conducted and planned for both waste determination and for the OU2 IM/IRA field treatability study, and what is planned for these vessels and in what timeframe. We will need a response on this issue by June 12, as already indicated to your staff.

If you have any questions, please contact Britt McCarthy or Scott Grace of my staff at extension 7199.
